ABOUT US

HALLMARK leader 海美科 Based on YUANFONG and BECCOR 贝高智能 ,We have Strong manufacturing capabilities and team collaboration.

We can provide one-stop supply and service, from the raw material to machine design,production,installation, commissioning, staff tr aining, and after-sales service,also provide the turnkey solution.To provide customers with high-quality products,reasonable prices,timely and professional services to meet the various needs of customers.

HALLMARK
leader 海美科

What we can Provide:

1.MDF/PB/OSB Production Line
2.Paper Impregnation Line
3. Flooring Production Line
4. HPL/Compact Production Line
5. Plywood Production line
6. Other related machines, spare parts and services

What we can service:

Training/Materials
We can provide 3 months to 3 years of production training and provide the most cost-effective raw materials.

GLUE
PLANTS

Automatic glue making equipment

We have a full set of glue reactor , the capacity from 0.5m³-50m³ , we can provide the service from the process design for customers, manuracturing and equlpment Installation testing.
We can provide technical guidance for the glue making process.

Intelligent glue mixing system

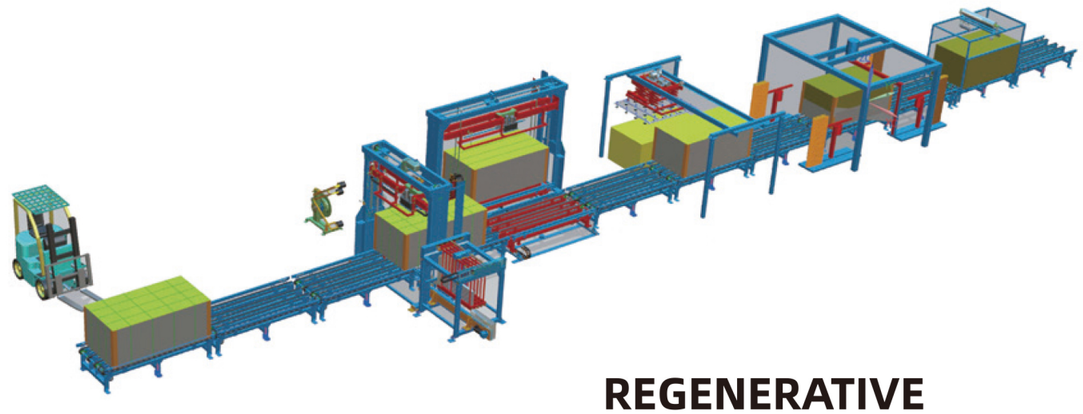
The structure is simple, realizes automatic rubber adjustment, high precision and high efficiency. The control method is simple and easy to operate, and the operation is simple.

The above mentioned plants can be used to Prepare :

- **Formaldehyde Production Plants**
- **Wood Board Glue Plants**
- **Paper Impregnation Line**

AUTOMATIC
PACKAGING LINE

The fully automatic packaging equipment allows the palletized products to be sent to the packaging station through the conveyor line. Through the set program, the film is automatically wrapped, the pads are placed, the cover plate is pressurized, the corner protectors are placed, etc. After the packaging is completed, it passes through the conveyor line. Delivered to the storage area and transported away by forklift.

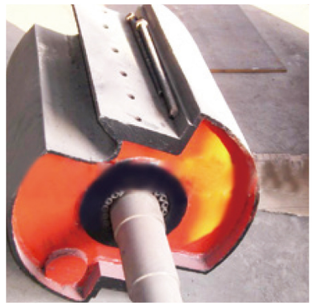


REGENERATIVE THERMAL OXIDATION
PRODUCTION LINE (RTO)

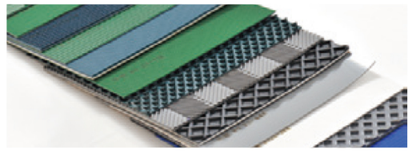
Regenerative Thermal Oxidation Production Line (RTO) is a common technology used for air pollution control in various industrial processes. RTO is used to treat volatile organic compounds (VOCs) and hazardous air pollutants (HAPs) emitted from industrial processes.

The RTO process involves the combustion of VOCs and HAPs at high temperatures (up to 1500 degrees Fahrenheit) in the presence of excess oxygen. The combustion process converts these pollutants into carbon dioxide and water vapor, which are then released into the atmosphere.

SPARE PARTS FOR
MDF/PB/OSB PRODUCTION LINE



DRUM

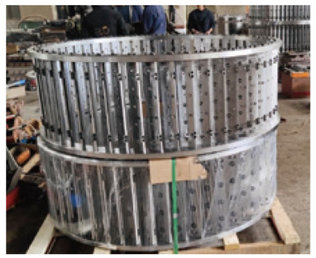


PVC BELT

BELT TYPE SCREW

REFINER DISC PLATE

KNIFE FOR CHIPPER



KNIFE RING

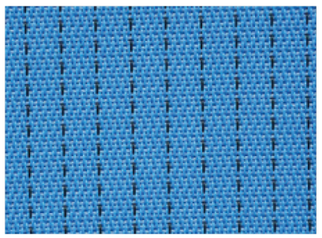
FEEDING DEVICE

DIAMOND ROLLER

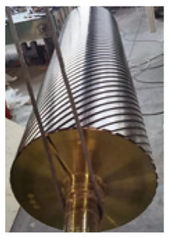
HOT PRESS CHAIN

ROLLER BEARING

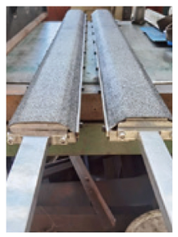
TRANSMISSION ACCESSORIES



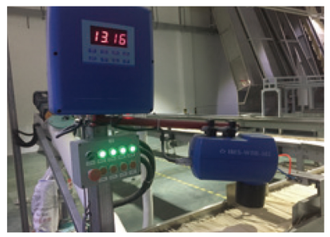
CONVEYOR BELT



THICKNESS ROLLER



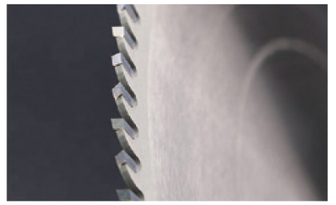
SANDING PAD



MOISTURE TESTER

ACCESSORIES

Saw blade and profile tools



Chain and chain pad for double end tenoner

Barrel and screw
